Abstract:

PURPOSE: To store and display schedule data by allowing weekly schedule data to be set and specifying a week in an optional month, and then writing and reading corresponding schedule data.

CONSTITUTION: For example, a mark indicating the 1st week is pressed on a tablet input part 12 and then an analog voltage signal corresponding to the depression position is sent as coordinate data on the X coordinate and Y coordinate from the tablet input part 12 to an A/D conversion part 37. The A/D conversion part 37 converts this voltage signal into a digital value, which is outputted to a CPU31. When a weekly schedule is written, a data input mode is entered by operating an 'I/O' key 22. Then, 'KANA' (Japanese syllabary) keys 14d and operated to input the schedule and an 'SCHE' key 17 is operated lastly to store display data which is displayed on a display part 13 in a memory part 32 as the weekly schedule.
